

## Translating the Evidence: From Publication to Practice

Lara K. Ellinger, PharmD, BCPS  
September 12, 2015

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

I have no relevant financial disclosures.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Objectives

1. Compare the benefits and risks of 12 months and 30 months of dual antiplatelet therapy after placement of drug-eluting stents.
2. Review the findings of the HEAT-PPCI trial on heparin versus bivalirudin in percutaneous coronary intervention
3. Describe what effect vitamin D has on fall prevention in elderly women
4. List limitations of the randomized controlled trials reviewed

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

Duration of DAPT?

### 12 OR 30 MONTHS OF DUAL ANTIPLATELET THERAPY AFTER DRUG- ELUTING STENTS

*N Engl J Med.* 2014;371(23):2155-2166.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Background

- IHD affects 13 million in the U.S.
- PCI most common revascularization procedure
  - Performed twice as often as CABG
- PCI indicated when
  - IHD unstable
  - Persistent symptoms
  - Severe ischemia or high-risk anatomy
  - Diabetes
  - Impaired LV function
- Efficacy: improves outcomes
  - In UA (>95%)
  - When used early in MI ± cardiogenic shock

*Harrison's Principles of Internal Medicine*

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Background

- Stents
  - BMS
    - Restenosis in 20% within 6 months
  - DES
    - Restenosis reduced to <10%
- Stent complication: thrombosis
  - Greatest risk within first 30 days
  - Similar between BMS and DES?
  - Everolimus may be safest (reduces MI and stent thrombosis compared to BMS)
  - Everolimus, sirolimus, and zotarolimus most efficacious

*Circulation.* 2012;125(23):2873-2891.  
*Harrison's Principles of Internal Medicine*

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Background

- DAPT
  - Aspirin + P2Y12 receptor inhibitor
- DAPT benefits
  - Decreases stent thrombosis
  - More intensive antiplatelet therapy helps further reduce thrombosis during time when metal stent is not endothelialized
  - Decreases MI

JAMA. 2005;293(17):2126.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Guidelines

- ACCF/AHA/SCAI 2011 and CHEST 2012
  - For ACS and PCI with stents, 12 months of DAPT:
    - Low-dose aspirin (75 mg to 100 mg daily) and
      - Ticagrelor 90 mg bid
      - or
      - Clopidogrel 75 mg daily
      - or
      - Prasugrel 10 mg daily
  - Continue low dose aspirin plus P2Y12 inhibitor for 12 months for all stents
  - Continue single antiplatelet therapy indefinitely

J Am Coll Cardiol. 2011;58(24):e44-122. Chest. 2012;141(2 Suppl):e637S-668S.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### DAPT Duration Controversy

- Longer duration (>12 months)
  - Benefit
    - Further decrease in risk for events
  - Increased risk for bleeding?
- Evidence
  - Multiple studies on DAPT duration that were not adequately powered
  - ISAR-SAFE
    - 6 months NI to 12 months of DAPT in drug eluting stents

Eur Heart J. 2015;36(20):1252-63.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### 12 or 30 Months of DAPT?

- Study objective
  - Determine the safety and efficacy of continuing DAPT beyond 1 year in patients with coronary stents
- Methods
  - Multicenter, randomized, placebo-controlled trial
  - Open-label from stent placement through month 12, then randomization to DAPT or aspirin + placebo

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### 12 or 30 Months of DAPT?

<p style="text-align: center;"><b>Inclusion</b></p> <ul style="list-style-type: none"> <li>• Adults undergoing PCI with stent placement</li> <li>• Either BMS or DES</li> <li>• "12 month clear"</li> </ul>	<p style="text-align: center;"><b>Exclusion</b></p> <p>At enrollment</p> <ul style="list-style-type: none"> <li>• Concomitant anticoagulation</li> <li>• Planned surgery</li> </ul> <p>At randomization</p> <ul style="list-style-type: none"> <li>• Death</li> <li>• MI or repeat PCI at &gt;6 weeks</li> <li>• CABG</li> <li>• Stroke</li> <li>• Major bleed</li> </ul>
---	---

Interventions				
Months	Aspirin Dose	Thienopyridine Dose		Placebo
		Clopidogrel	Prasugrel	
0 to 6	75 mg to 325 mg	Loading: 300 to 600 mg Maintenance: 75 mg daily	Loading: 60 mg Maintenance: 10 mg daily	NA
6 to 12	75 mg to 162 mg	75 mg daily	10 mg daily	NA
12 to 30	75 mg to 162 mg	75 mg daily	10 mg daily	✓

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## 12 or 30 Months of DAPT?

- Follow-up
  - 33 months post-procedure
  - 6, 12, 15, 24, 30, and 33 months post-PCI
  - Months 30 to 33 were “off-treatment”
  - Events adjudicated by independent committee

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Primary Endpoints

- |   |  |
|---|--|
| <p><b>Efficacy</b></p> <ul style="list-style-type: none"> <li>• MACCE                     <ul style="list-style-type: none"> <li>– Death</li> <li>– MI</li> <li>– Stroke</li> </ul> </li> <li>• Stent thrombosis</li> </ul> | <p><b>Safety</b></p> <ul style="list-style-type: none"> <li>• Severe/moderate bleeding (GUSTO)</li> <li>• BARC bleeding (secondary)</li> </ul> |

|--|--|

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## 12 or 30 Months of DAPT?

- Statistical considerations
  - Hochberg approach
    - Error rate controlled at 0.05
  - Efficacy (ITT)
    - 9,800 DES patients at 12 months = 85% power for superiority
  - Safety (PP)
    - 9960 DES patients if NI margin set at 0.8% = 80% power for noninferiority

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

At 12 months

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Baseline Characteristics

## 12 or 30 Months of DAPT?

- Indication for PCI
  - STEMI: 10%
  - NSTEMI: 15%
  - Angina
    - Unstable: 17%
    - Stable: 38%
  - Other: 20%
- Stent type
  - Everolimus: 47%
  - Paclitaxel: 27%
  - Zotarolimus: 13%
  - Sirolimus: 11%
- Thienopyridine
  - Clopidogrel 65%
  - Prasugrel 35%

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Efficacy Outcomes – 12 to 30 months

	T No. of patients (%)	P No. of patients (%)	Hazard ratio T vs. P (95% CI)	P-value	NNT
Stent thrombosis	19 (0.4)	65 (1.4)	0.29 (0.17 to 0.48)	<0.001	100
MACCE	211 (4.3)	285 (5.9)	0.71 (0.59 to 0.85)	<0.001	63
Death (overall)	98 (2.0)	74 (1.5)	1.36 (1.00 to 1.85)	0.05	NA
Death (cardiac)	45 (0.9)	47 (1.0)	1.00 (0.66 to 1.52)	0.98	NA
Death (vascular)	5 (0.1)	5 (0.1)	0.98 (0.28 to 3.39)	0.98	NA
Death (noncardiovascular)	48 (1.0)	22 (0.5)	2.23 (1.32 to 3.78)	0.002	NNH: 200
MI	99 (2.1)	198 (4.1)	0.47 (0.37 to 0.61)	<0.001	50
Stroke	37 (0.8)	43 (0.9)	0.80 (0.51 to 1.25)	0.32	NA

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

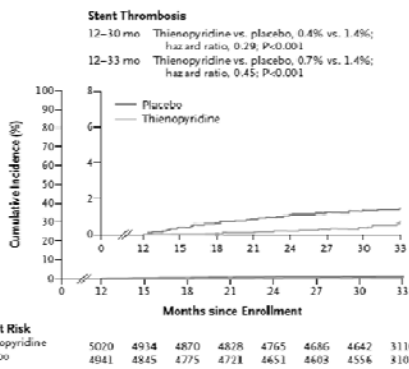

Figure 2. Cumulative incidence of Stent Thrombosis, According to Study Group.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

12-30 mo Thienopyridine vs. placebo, 4.3% vs. 5.9%; hazard ratio, 0.71, P<0.001  
17-33 mo Thienopyridine vs. placebo, 3.6% vs. 5.3%; hazard ratio, 0.82; P=0.02

Figure 3. Cumulative Incidence of Major Adverse Cardiovascular and Cerebrovascular Events, According to Study Group.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Safety (Bleeding) Outcomes – 12 to 30 months

	T No. of patients (%)	P No. of patients (%)	Hazard ratio T vs. P (95% CI)	P-value	NNH
GUSTO (severe or moderate)	119 (2.5)	73 (1.6)	1.0 (0.4 to 1.5)	0.001	111
GUSTO (severe)	38 (0.8)	26 (0.6)	0.2 (-0.1 to 0.6)	0.15	NA
GUSTO (moderate)	81 (1.7)			0.004	142
BARC type 2, 3, or 5	263 (5.6)			<0.001	37
BARC Type 2	145 (3.1)			<0.001	62
BARC Type 3	122 (2.6)	68 (1.5)	1.1 (0.6 to 1.7)	<0.001	90
BARC Type 5	7 (0.1)	4 (0.1)	0.1 (-0.1 to 0.2)	0.38	NA

Noninferiority for bleeding not found (difference not <0.8)

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Limitations

- |   |  |
|---|--|
| <p><b>Strengths</b></p> <ul style="list-style-type: none"> <li>• Strong design                     <ul style="list-style-type: none"> <li>– 1<sup>st</sup> RCT to assess longer duration</li> </ul> </li> <li>• Used appropriate populations for data analysis                     <ul style="list-style-type: none"> <li>– ITT – superiority</li> <li>– PP – noninferiority</li> </ul> </li> <li>• Major undertaking/coordination</li> </ul> | <p><b>Limitations</b></p> <ul style="list-style-type: none"> <li>• Only those who did not have an event in 1<sup>st</sup> 12 months were randomized</li> <li>• BMS data analyzed separately</li> <li>• No data for ticagrelor</li> <li>• Selection bias</li> <li>• Pts not randomized to thienopyridine or stent type</li> <li>• No net clinical benefit analysis done</li> <li>• Limited external validity for race and gender</li> </ul> |

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### 12 or 30 months of DAPT?

- Conclusion
  - Extension of DAPT beyond 1 year of DES placement
    - Provides additional benefit for reduction of ischemic events
      - Stent thrombosis
      - Myocardial infarction
    - Results in an increase in bleeding events
    - Increase in non-cardiovascular mortality?

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### 12 or 30 months of DAPT?

- From publication to practice:
  - Consider extending DAPT after DES for 30 months total for those who
    - Have lower bleeding risks
    - Are able to adhere to the regimen
    - Are white males

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Which of the following was NOT a finding of the DAPT trial?

- A. Extended DAPT lowers risk for stent thrombosis
- B. Severe bleeding as defined by both GUSTO and BARC criteria was significantly greater with extended DAPT treatment
- C. Cardiac death was significantly greater with extended DAPT treatment
- D. Non-cardiovascular death was significantly greater with extended DAPT treatment

0% 0% 0% 0%

Extended DAPT lowers risk for stent thrombosis  
 Severe bleeding as defined by both GUSTO and BARC criteria was significantly greater with extended DAPT treatment  
 Cardiac death was significantly greater with extended DAPT treatment  
 Non-cardiovascular death was significantly greater with extended DAPT treatment

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### HEAT-PPCI UNFRACTIONATED HEPARIN VERSUS BIVALIRUDIN IN PRIMARY PERCUTANEOUS CORONARY INTERVENTION

Lancet. 2014;384(9957):1849-1858.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Background

- Antithrombin agents during PCI
  - Bivalirudin (class I; Level B)
    - Regardless if prior treatment with UFH
    - Possible reduced bleeding compared to UFH?
      - But not with concomitant GP IIb/IIIa inhibitor
    - Increase in ischemic events?
  - UFH (class I; Level C)

Levine, et al. Circulation. 2011;124(23):2574-2609

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Background

**HORIZONS-AMI 2008**

- STEMI pts and PPCI
- Bivalirudin had lower “net adverse clinical events” than heparin + GP IIb/IIIa inhibitors
- RR, 0.76; 95% CI, 0.63 to 0.92; P=0.005
  - Lower bleeding with B
  - Higher stent thrombosis within 24 hours with B
  - Lower cardiac and overall death with B

**EUROMAX 2013**

- STEMI pts and PPCI
- Bivalirudin reduced composite of death or major bleeding compared to UFH/LMWH
- RR, 0.60; 95% CI, 0.43 to 0.82; p=0.001
  - Lower bleeding with B
  - Higher stent thrombosis with B
  - No difference in death or MI

N Engl J Med. 2013;369(23):2207-17  
N Engl J Med 2008;358(21):2218-30.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Bivalirudin vs. Heparin

- Study objective
  - To assess the relative safety and efficacy of heparin and bivalirudin during PPCI
- Methods
  - Open-label, single-center, randomized controlled trial
    - Stratified by age and cardiogenic shock
  - Duration: 28 days

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Bivalirudin vs. Heparin

- | <b>Inclusion</b>  | <b>Exclusion</b>  |
|---|---|
| <ul style="list-style-type: none"> <li>• Adults scheduled for PPCI</li> </ul> | <ul style="list-style-type: none"> <li>• Intolerance or C/I to any study drug</li> <li>• Active bleeding</li> <li>• Artificial ventilation</li> <li>• Impaired consciousness</li> </ul> |

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Bivalirudin vs. Heparin

- Interventions
  - Heparin (n=907)
    - 70 U/kg body weight before PCI
    - Add'l doses if ACT <200 seconds
  - Bivalirudin (n=905)
    - 0.75 mg/kg bolus + infusion of 1.75 mg/kg/hour
    - Re-bolus of 0.3 mg/kg if ACT <225 seconds
  - GP IIb/IIIa inhibitor (abciximab) allowed if
    - Massive thrombus
    - Slow or no re-flow
    - Thrombotic complication

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Primary Outcomes

- | <b>Efficacy</b>  | <b>Safety</b>  |
|--|--|
| <ul style="list-style-type: none"> <li>• Proportion of patients with <math>\geq 1</math> MACE at 28 days           <ul style="list-style-type: none"> <li>– All-cause mortality</li> <li>– CVA</li> <li>– Reinfarction</li> <li>– Add'l revascularization</li> </ul> </li> </ul> | <ul style="list-style-type: none"> <li>• Proportion of patients who had major bleeding by 28 days per BARC definition (types 3-5)</li> </ul> |

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Bivalirudin vs. Heparin

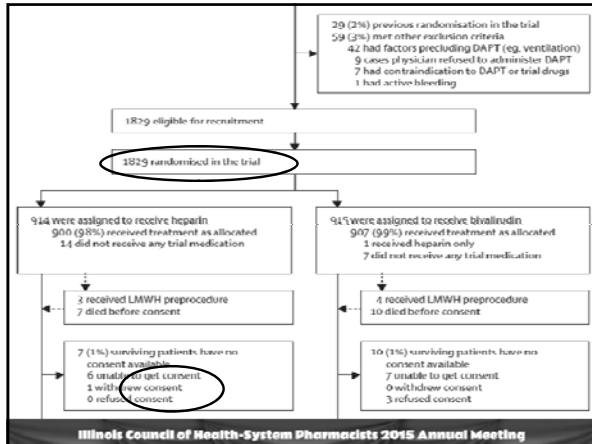

- Secondary outcomes
  - Stent thrombosis rates
  - Cardiac enzymes
  - Minor bleeding (BARC type 2)
- Subgroup analyses
  - Arterial vascular access route
  - Left ventricular function
  - Age
  - Diabetes
  - Type of P2Y12 inhibitor
  - Whether or not PCI was attempted

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Bivalirudin vs. Heparin

- MACE rate estimated to be 7.5% in both groups
- Chi-squared test for primary outcomes
- ITT
- $\alpha=0.05$

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Baseline Characteristics

- 77% STEMI
- Mean age 63 years
- 28% female
- 96% white
- 37% - 45%:
  - DM
  - HTN
  - HL
  - FH of CVD
  - Smoked
- Noteworthy differences
  - Previous MI
    - Bivalirudin: 14%
    - Heparin: 10%
  - Previous PCI
    - Bivalirudin: 8%
    - Heparin: 6%

### Baseline Characteristics

- P2Y12 inhibitor
  - Ticagrelor (62%)
  - Prasugrel (27%)
  - Clopidogrel (11%)
- 82% managed with PCI
  - 90% of these had stent
    - 80% had DES
- GP IIb/IIIa inhibitor use
  - Bivalirudin: 13%
  - Heparin: 15%
- Aspirin use in all
- 80% had radial access site
- 45% had normal EF after event
- Approximately 80% - 90% had meds at d/c:
  - ACE or ARB
  - Aspirin
  - Beta blocker
  - P2Y12 inhibitor
  - Statin

### Efficacy Outcomes

	Bivalirudin No. of patients (%)	Heparin No. of patients (%)	Relative risk (95% CI)	P-value	NNT
Primary efficacy outcome	79 (8.7)	52 (5.7)	1.52 (1.09 to 2.13)	0.01	34
Death	46 (5.1)	39 (4.3)	1.18 (0.78 to 1.79)	0.43	NA
CVA	15 (1.6)	11 (1.2)	1.37 (0.63 to 2.96)	0.43	NA
MI or re-infarct	24 (2.7)	8 (0.9)	3.01 (1.36 to 6.66)	0.004	56
Revascularization	24 (2.7)	6 (0.7)	4.01 (1.65 to 9.76)	0.001	50

### Safety (Bleeding) Outcomes

	Bivalirudin No. of patients (%)	Heparin No. of patients (%)	Relative risk (95% CI)	P-value	NNH
Major bleed (primary safety)	32 (3.5)	28 (3.1)	1.15 (0.70 to 1.89)	0.59	NA
Minor bleed	83 (9.2)	98 (10.8)	0.85 (0.64 to 1.12)	0.25	NA
Any bleed	113 (12.5)	122 (13.5)	0.93 (0.73 to 1.18)	0.54	NA

## Limitations

<p><b>Strengths</b></p> <ul style="list-style-type: none"> <li>• Delayed consent             <ul style="list-style-type: none"> <li>– Allowed for sicker patients</li> </ul> </li> <li>• First RCT to compare bivalirudin and heparin with GP IIb/IIIa use in both groups</li> <li>• Free from manufacturer bias</li> </ul>	<p><b>Limitations</b></p> <ul style="list-style-type: none"> <li>• Delayed consent?             <ul style="list-style-type: none"> <li>– Ethical?</li> </ul> </li> <li>• Single-center study</li> <li>• Homogeneous population in terms of race</li> <li>• Lower heparin doses than in clinical practice?</li> <li>• Higher rates of previous PCI and MI in bivalirudin</li> </ul>
---	--

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Bivalirudin vs. Heparin

- **Conclusions**
  - Heparin provides a benefit over bivalirudin during PPCI for
    - Acute stent thrombosis
    - Reinfarction
  - Heparin does not increase the risk for bleeding as compared to bivalirudin

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Bivalirudin vs. Heparin

- From publication to practice
  - Heparin may be preferred to bivalirudin during PPCI without increased safety concerns
    - When used in combination with newer P2Y12 inhibitors
  - Can't be as confident about this in females, non-whites
  - Both bivalirudin and heparin may be used per guidelines – evidence may increase strength of recommendation for heparin

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Which is NOT a criticism of the HEAT-PPCI trial?

- A. Enrollment raises ethical concerns
- B. Heparin dosing may be higher than usual clinical practice
- C. Patients were healthier than in other similar trials
- D. Open-label design

0% 0% 0% 0%

Enrollment raises ethical concerns  
Heparin dosing may be higher than usual clinical practice  
Patients were healthier than in other similar trials  
Open-label design

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

Taking care of our elderly:

## EXERCISE AND VITAMIN D IN FALL PREVENTION AMONG OLDER WOMEN

JAMA Intern Med. 2015;175(5):703-711.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Background

- Falls in the elderly
  - Leading cause of injury and injury-related death
  - 20% of falls require medical attention
  - <1/10 results in fracture

N Engl J Med. 2003;348(1):42-49.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Background

- Exercise
  - Individualized training and group exercise effective in preventing falls
  - Strength and balance training may reduce noninjurious and injurious falls by 15% to 50%

BMC Geriatrics. 2012;12:12.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Background

- Vitamin D deficiency
  - <25 nmol/L
  - Decreased muscle function, performance
  - Increased disability
  - Associated with frail phenotypes
  - Inversely associated with falls
- Evidence conflicting for benefits of supplementation

Ann Intern Med. 2013;158:691-696.  
Biomed Res Int. 2015;2015:953241.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Background

- USPSTF Recommendations for home-dwelling postmenopausal women and primary prevention of fractures
  - **Inconclusive:** whether or not vitamin D >400 IU/day + calcium >1000 mg/day
  - **Recommends against** vitamin D ≤400 IU/day + calcium ≤1000 mg/day

Ann Intern Med. 2013;158:691-696.

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Exercise and Vitamin D

- Study objective
  - Assess exercise training and vitamin D supplementation in reducing falls and improving bone density in older women at risk of falls
- Methods
  - Double-blind, placebo-controlled (vitamin D), and open exercise intervention trial with 4 arms; 2 year duration

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Exercise and Vitamin D

- | <b>Inclusion</b>  | <b>Exclusion</b>   |
|---|--|
| <ul style="list-style-type: none"> <li>• Women 70 to 80 yrs in Finland</li> <li>• Living at home independently</li> <li>• History of ≥1 fall in past year</li> <li>• No regular vitamin D supplements intake</li> </ul> | <ul style="list-style-type: none"> <li>• Exercise &gt;2 hrs/wk</li> <li>• Fx in previous 12 mo.</li> <li>• Inability to exercise</li> <li>• Marked decline in ADL</li> <li>• Cognitive impairment</li> <li>• Primary hyperthyroidism</li> <li>• Degenerative dz</li> </ul> |

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Interventions

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Exercise Description

- Supervised, progressive group training
- 2x/wk for 12 months
- 1x/wk for remaining 12 months
- Balance challenging
- Weight bearing
- Strengthening
- Agility
- Weight machines
- Pulleys
- Free weights
- Home training

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Endpoints

- Primary
  - Monthly reported falls
- Secondary
  - Injurious falls
    - Bruises, abrasions, contusions, sprains, fractures, head injuries
  - Number of fallers and injured fallers
  - Bone density
  - Physical functioning

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Statistics

- Power calculation
- 260 pts provided 80% power to detect 30% between-group difference at 2 years ( $\alpha=0.05$ )
  - Wanted to enroll more in order to eliminate type I error for interaction between vitamin D and exercise
- ITT

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Exercise and Vitamin D

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Baseline Characteristics

- Well-balanced groups
- Serum 25-hydroxyvitamin D level approx. 26-27 ng/mL
- Mean age 74 years
- Average # of meds: 2.5
- Sufficient calcium intake at baseline and 24 months
- Low alcohol consumption
- Relatively healthy

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

## Results

- Exercise well-tolerated
- 98% pill compliance
- Vitamin D levels increased in Vitamin D groups compared to placebo
  - 25.1 ng/mL → 37.0 ng/mL
- Total of
  - 928 falls
  - 281 fallers
  - 190 multiple fallers
  - 117 multiple injured fallers

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Rate of falls per 100 person-years

	Placebo without Exercise	Vitamin D without Exercise	Placebo and Exercise	Vitamin D and Exercise
All falls	118.2	132.1	120.7	113.1
Injurious falls	13.2	12.9	6.5	5.0
All falls IRR (95% CI)	Reference	1.08 (0.78 to 1.52)	1.07 (0.77 to 1.45)	0.99 (0.72 to 1.39)
Injurious falls IRR (95% CI)	Reference	0.84 (0.45 to 1.57)	0.46 (0.22 to 0.95)	0.38 (0.17 to 0.81)

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Hazard ratios for falls

	Vitamin D Without Exercise	Placebo and Exercise	Vitamin D and Exercise
Fallers	0.77 (0.54-1.11)	0.93 (0.66-1.31)	0.91 (0.64-1.28)
Injured fallers	0.89 (0.47-1.69)	0.47 (0.23-0.99) <sup>a</sup>	0.38 (0.17-0.83) <sup>a</sup>
Multiple fallers	1.07 (0.71-1.62)	1.14 (0.76-1.71)	1.14 (0.77-1.71)

Exercise ± vitamin D reduces only injurious falls

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

Figure 2. Hazard ratios (95% CI) for fallers, injured fallers, and multiple fallers using the Placebo Without Exercise Group as the Reference

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Results - secondary

	Change at 24 mo	P Value <sup>a</sup>
<b>Femoral neck BMD, g/cm<sup>2</sup></b>		
Placebo without exercise	-1.22 (-4.75 to 2.45)	NA
Vitamin D without exercise	-0.87 (-4.47 to 2.86)	.02
Placebo and exercise	-0.98 (-4.55 to 2.73)	.01
Vitamin D and exercise	-1.24 (-4.72 to 2.38)	.04
<b>Distal tibia trabecular density, mg/cm<sup>3</sup></b>		
Placebo without exercise	-0.49 (-3.77 to 2.80)	NA
Vitamin D without exercise	0.03 (-3.36 to 3.42)	.12
Placebo and exercise	-0.16 (-3.43 to 3.11)	.41
Vitamin D and exercise	0.19 (-3.04 to 3.42)	.02

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Results - secondary

Outcome	Change at 24 mo	P Value <sup>a</sup>
<b>Backward walking, proportion of those able to do 6.1 min, %</b>		
Placebo without exercise	7.76 (-2.87 to 18.47)	NA
Vitamin D without exercise	9.49 (-0.66 to 20.08)	.68
Placebo and exercise	26.27 (15.71 to 35.13)	.001
Vitamin D and exercise	25.47 (15.30 to 33.39)	.03
<b>Muscle strength, N/kg</b>		
Placebo without exercise	1.8 (-4.8 to 8.4)	NA
Vitamin D without exercise	1.5 (-5.0 to 8.1)	.10
Placebo and exercise	14.0 (7.8 to 20.2)	<.001
Vitamin D and exercise	15.6 (9.1 to 22.2)	<.001

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Exercise and Vitamin D

- |  |  |
|--|--|
| <p><b>Strengths</b></p> <ul style="list-style-type: none"> <li>• Strong design, long duration</li> <li>• High adherence</li> <li>• Low withdrawal</li> <li>• Recruited patients at risk for falls</li> </ul> | <p><b>Limitations</b></p> <ul style="list-style-type: none"> <li>• No reporting of fractures</li> <li>• Baseline levels of vitamin D high</li> <li>• Relatively good health/physical condition</li> <li>• Limited external validity</li> </ul> |
|--|--|

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Conclusion

- Exercise ± vitamin D reduces the risk for injurious falls among elderly women
- Interventions alone and in combo do not decrease overall falls

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Exercise and Vitamin D

- From publication to practice
  - Exercise ± vitamin D did not reduce risk for all fall types
  - Important to consider fall prevention strategies with osteoporosis prevention strategies, but this trial does not support
  - Justifies USPSTF recommendations
  - Don't prescribe vitamin D + exercise for purposes of preventing falls in elderly women

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Based on this trial, which of the following statements is TRUE?

- Vitamin D alone enhanced muscle strength and balance
- Vitamin D reduced rate of overall falls
- Vitamin D did NOT reduce rate of injurious falls
- Vitamin D and exercise did NOT reduce the rate of multiple falls

Illinois Council of Health-System Pharmacists 2015 Annual Meeting

### Which of the following is a limitation common to ALL the trials discussed?

- Selection bias
- Single-center study
- Manufacturer bias
- Limited external validity

Illinois Council of Health-System Pharmacists 2015 Annual Meeting
